

Kumari Arivial Peravai(KAP)

Young Scientists Programme 2012-2013

Planning Meet

Friends and dears,

As you are aware that the Young Scientists Programme being conducted by KAP between June to May every year is well accepted and recognized by many people and institutions across our district and Tamilnadu. Some of the important topics in which the young scientists of previous year batches have gained knowledge are '**Climate Change**', '**Water and Life**', '**Energy and Environmental Challenges**' etc. **Food and Agriculture** is another important burning issue in which almost all the world countries are worried about and majority of world population is starving and struggling to overcome. Over population, poverty, hunger, malnutrition, shortage in food production, wastage during transport and storage are important problems affecting world countries and India also. Failure in monsoon, drought, suicidal death among farmers are common in Indian States. Just to analyze the cause, suggest some remedial measures and create awareness, scientists, social scientists, doctors, teachers and educationalist join hand and sit together, discuss, decide how we can convey and communicate the message among students, schools and public too. With this fundamental principle in mind we should formulate the schedule and carry over this year programme.

Let us join and assemble together on **Sunday, the 10th June, 2012 at 2.30 PM at Scott Christian Hr. Secondary School, Nagercoil.** Please attend, share your views and plan for the future.
